AWARDS

Partner All Star - Solutioning - Global, Google Cloud (2023)

Tech Efficiency, iSolution (2024)

CEO's Letter of Appreciation, iSolution (2025)

SKILLS

Solutioning ●●●●●
Foundation Compliance & Enterprise Governance, Landing Zone with NVAs, Agentic AI HLD/LLD, Strategy, Transformation,BCDR

Cloud ●●●●●
GCP, Azure, AWS

Agentic AI ●●●●●
Graph, Loop, Advanced RAG, Agent State Tracing, Token tracking and optimizations,

GitOps ●●●●●
Helm, Git, Terraform, KCC, ARM

DevSecOps ●●●●●
Docker, Kubernetes, Staged CI/CD, Snyk

OS & Scripting ●●●●●
Linux & Shell, Cloud CLI, Python

Platform for AI ●●●●●
Ollama, vLLM

CERTIFICATIONS

Professional Cloud Architect (Google)
Azure Solutions Architect Expert (Microsoft)

SOFT SKILLS

Responsibility, Team Enablement, Adaptability, Eloquence, Quick Grasping

EDUCATION

IIT Dharwad
B. Tech.

PROFILE SUMMARY

An evolving individual driven by the strong belief that yesterday's experiences and continuous learning are the non-negotiable foundations of today's excellence. Passionate about building enterprise systems from the ground up with multi-lens approach. Solutined, led, implemented innovative digital transformation projects solving complex business problems that accounted for growth. Collaborated with CXOs and steered them in aligning the technical strategies with the business objectives.

PROFESSIONAL EXPERIENCE

Senior Architect-Platform Design, ELM (Emdad by ELM's on-roll)

- Aug 2025 – Present | Riyadh
- Revamping the technical strategy and integrating multiple sites under hybrid multi-cloud approaches, enforcing the ring pattern for high criticality and mesh for low criticality environments balancing agility & blast radius. Strategizing the unification of fragmented functional units under one umbrella.
 - Solutining an Agentic AI system for the unit (Inspired by the OpenClaw, however, building it lean towards cloud engineering), containerized for multi-tenancy isolation:
 - The system works in Graph pattern with Intent & smart router managing the state and delegating to the worker agents with shell execution access and are inter-orchestrated in a ReAct loop until the desired results are achieved while safety is flagged by the policy gate.
 - The STM/LTM are enabled with RAG/CAG respectively, alongside in-memory cached summary.
 - Further, exploring the inclusion of the judgment as code, self improving agents on a single tenant, vector poisoning protection, heterogeneous LLM as a judge for gate, auto choosing of LLM tier.

Cloud Solution Architect, ELM (iSolution's Payroll)

- May 2024 – Aug 2025 | Remote
- Architected the Cloud, AI and DevOps transformation projects for Saudi/Qatari enterprises, whose consumption are beyond \$3M ARR.
 - Created a semantic layer over the dashboard for databases, that can fetch the desired data and visual representation when queried in plain English, reducing TTR by 4-16hrs for new queries.
 - Chosen as Lead Architect at ELM for chalking the complete Cloud Adoption and GitOps integration strategy. Solely designed and implemented the same, with framework-pillars being agility, scaling, cost centricity, NCA/SAMA compliance, reliability and cloud native sustainability.
 - **Foundation:** Implemented the GCP adoption strategy. Built the foundation with strong Governance & FinOps control policies at the inception, with a blend of layered architecture, organization policies enforcement, BU divisions, IAM deny policies, reusable IaC artifacts, ensuring no single bad actor can cause large scale adversity or limiting the blast radius.
 - **Landing Zone Hub:** Equipped the zone with highly available NVAs. The complete ingress/egress traffic is controlled with North-South, East-West NGFWs with a bridging WAF, complying with 85% of NCA ECC CCC security controls by enforcing a tailored and advance security profiling.
 - **Spokes:** Each spoke defined by a shared VPC for lower critical environments and standalone VPC for higher critical environments. The spokes are divided to cater both legacy re-hosted operations and modernized CNCF GitOps practices. This division played a key role in reducing the friction of adoption, by normalizing the readiness levels to one's desired level.
 - **Shared Services:** The organization wide GRC control, management and data protection tools are instilled in this dedicated zones, primarily serving as the central management, logging, monitoring and observability centre.
 - Functioned as Advisory Architect for other premium key-clients like SAB, Qatar Fin. Centre Reg. Authority, National Center for Waste Mgmt., Thiqah(now acquired by ELM), Dammam Airports ensuring that the relevant best practices are being followed by the solutioning and delivery teams.
 - Devised a zero-day CVE-tolerant business continuity strategy for the landing zones.

Solution Architect, Engineering Lead, Shivaami Cloud Services

- Oct 2021 – Feb 2024 | Mumbai
- Started as an engineer and was promoted soon to lead a 10-member team of Cloud Devops, FinOps and Development pods with personalized guidance, emphasizing self-sustainability and operational efficiency.
 - Architected and implemented cloud modernization, migration & BCDR strategies according to customers' requirements ranging from Fin-tech to Healthcare clients on GCP, Azure and AWS.
 - Spearheaded South India's largest NBFC's GCP project making the systems dynamically scalable through micro-services adoption achieving 20% cost savings. Optimized SDLC through cloud-native services adoption and environment automation.
 - Initiated value-addition strategies for selected key clients, increasing customer stickiness and improving retention by over 50%. This effort also served as a promoter index, boosting the revenue streams and contributing 5% of net new revenue.
 - Collaborated with CXOs to standardize delivery procedures ensuring audit compliance and designed OKRs for impact measurement. This streamlining facilitated a hassle-free 175% growth in business.
 - Led the vendor relations, re-negotiated the margins by bagging at least additional 3% per vendor.
 - As a part-time product owner, adopted MoSCoW framework and mapped the user persona, altered the product features, improving the users' interaction experience.
 - Initiated hosting of internal knowledge-sharing sessions over new technologies and industrial best practices and enabled the cloud engineering team over the basics of Containers, Docker, Kubernetes, AVDs.

Azure Implementation Specialist, G7CR Technologies

- Aug 2019 – Aug 2021 | Bangalore
- As part of the tech evangelist team, actively explored new Azure releases to create innovative and elegant integrations for business purposes.
 - Transformed a fintech infrastructure on Azure swiftly, delivering a remarkable experience and establishing a new organizational benchmark.
